Homework 1

How much an avocado cost?

Analyze avocado prices in `data` directory. There are `train.json` and `test.json` files. Ask yourself a question about given data. Get some insights about predictor and response (`AveragePrice`) variables. Build a custom model, fit it to the `train.json` data and evaluate it for `test.json`. Answer your question.

Good luck, don't hesitate to ask for help if needed!
