# Homework 3

## Netflix

There is a dataset in .csv format about movies and TV shows available on netflix. Using Pandas, load the data, look at it, transform, if needed and answer following questions:

- Which production was added most recently?
- What country produces, on average, longest movies/shows?
- How many productions in each genre are available per country in the dataset?
- What is the most common rating for each country? How it looks like for each director?
- Is there a pair of director - actor which appears more than once in the data? Is there a pair that appears more than twice?
